AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A computer implemented method to provide a home page identifier to a client computing device, the method comprising:

receiving, over a computer network, at a redirection web site, a home page request from the client computing device, the home page request including a user identifier that identifies a user of the client device, one or more client network connection identifiers, and a client current timestamp corresponding to a timestamp at the client computing device, wherein the redirection web site performs ~~the~~ steps including:

obtaining [[a]] the client current timestamp from the received homepage request ~~identifying a current time and a current day~~;

obtaining, from the received home page request, the one or more network connection identifiers that identify one or more computer networks to which the client computing device is currently connected ~~from the home page request~~;

retrieving, from a nonvolatile storage device, the home page identifier , wherein the retrieving further comprises:

selecting, from the nonvolatile storage device, one or more records that correspond to the

user identifier, <u>wherein the one or more records that correspond to the user are arranged in a home page table that corresponds to the user, wherein the home page table includes a plurality of entries, and wherein each entry includes a network identifier field, a day of the week field, a time range field, and an address field, and</u> wherein the nonvolatile storage device includes records for a plurality of user identifiers; ~~and~~

identifying, from the group of selected records, the home page identifier based upon the obtained timestamp and the obtained network connection identifiers<u>, wherein the identifying includes selecting one of the entries by matching the obtained timestamp with the day of the week field and the time range field and by matching the obtained one or more network connection identifiers with the network identifier field</u>; and

<u>acquiring the identified home page identifier from the address field of the selected entry;</u>

<u>redirecting the browser executing on the client computing device to the retrieved home page identifier;</u>

setting a browser's home page to the retrieved home page identifier<u>, and</u>~~, wherein the setting of the browser's home page includes redirecting the~~

~~browser executing on the client computing device~~
~~to the retrieved home page identifier.~~

repeatedly re-performing, by the redirection web site,
the obtaining of the client current timestamp,
the obtaining of the one or more network
connection identifiers, the retrieving of the
home page identifier, and the redirecting of the
browser at predetermined time intervals.

6. (canceled)

7. (canceled)

8. (previously presented) An information handling system to
provide a home page identifier to a client computing
device, the information handling system comprising:
one or more processors;
a memory accessible by the processors;
a nonvolatile storage device;
one or more network adapters connecting the information
handling system to one or more computer networks; and
an home page selection tool for selecting the home page,
the home page selection tool including a plurality of
instructions stored in the memory and executed by at

least one of the processors to perform actions
comprising:

receiving, at one of the network adapters over the
computer network, a home page request from the
client computing device, the home page request
including a user identifier that identifies a
user of the client device, one or more client
network connection identifiers, and a client
current timestamp corresponding to a timestamp at
the client computing device, wherein the
information handling system is a redirection web
server that performs the steps including:

obtaining [[a]] the client current timestamp from
the received homepage request identifying a
current time and a current day;

obtaining, from the received home page request,
the one or more network connection
identifiers that identify one or more
computer networks to which the client
computing device is currently connected from
the home page request;

retrieving, from the nonvolatile storage device,
a home page identifier , wherein the
retrieving further comprises:

selecting, from the nonvolatile storage device,
one or more records that correspond to the
user identifier, wherein the one or more
records that correspond to the user are
arranged in a home page table that
corresponds to the user, wherein the home

page table includes a plurality of entries,
and wherein each entry includes a network
identifier field, a day of the week field, a
time range field, and an address field, and
wherein the nonvolatile storage device
includes records for a plurality of user
identifiers; ~~and~~

identifying, from the group of selected records,
the home page identifier based upon the
obtained timestamp and the obtained network
connection identifiers, wherein the
identifying includes selecting one of the
entries by matching the obtained timestamp
with the day of the week field and the time
range field and by matching the obtained one
or more network connection identifiers with
the network identifier field; and

acquiring the identified home page identifier
from the address field of the selected
entry;

redirecting the browser executing on the client
computing device to the retrieved home page
identifier;

setting a browser's home page to the retrieved
home page identifier, and ~~wherein the~~
~~setting of the browser's home page includes~~
~~redirecting the browser executing on the~~
~~client computing device to the retrieved~~
~~home page identifier.~~

repeatedly re-performing, by the redirection web
site, the obtaining of the client current
timestamp, the obtaining of the one or more
network connection identifiers, the
retrieving of the home page identifier, and
the redirecting of the browser at
predetermined time intervals;.

13.   (canceled)

14.   (currently amended) A computer program product stored
   on a computer readable medium comprising computer
   instructions that, when executed by an information handling
   system, cause the information handling system to perform
   actions to provide a home page identifier to a client
   computing device, the actions method comprising:
   receiving, over a computer network, at a redirection web
        site, a home page request from the client computing
        device, the home page request including a user
        identifier that identifies a user of the client
        device, one or more client network connection
        identifiers, and a client current timestamp
        corresponding to a timestamp at the client computing

device, wherein the redirection web site performs ~~the~~
steps including:

obtaining [[a]] the client current timestamp from the
received homepage request ~~identifying a current
time and a current day~~;

obtaining, from the received home page request, the
one or more network connection identifiers that
identify one or more computer networks to which
the client computing device is currently
connected ~~from the home page request~~;

retrieving, from a nonvolatile storage device, the
home page identifier , wherein the retrieving
further comprises:

selecting, from the nonvolatile storage device,
one or more records that correspond to the
user identifier, wherein the one or more
records that correspond to the user are
arranged in a home page table that
corresponds to the user, wherein the home
page table includes a plurality of entries,
and wherein each entry includes a network
identifier field, a day of the week field, a
time range field, and an address field, and
wherein the nonvolatile storage device
includes records for a plurality of user
identifiers; ~~and~~

identifying, from the group of selected records,
the home page identifier based upon the
obtained timestamp and the obtained network
connection identifiers, wherein the

identifying includes selecting one of the
entries by matching the obtained timestamp
with the day of the week field and the time
range field and by matching the obtained one
or more network connection identifiers with
the network identifier field; and
acquiring the identified home page identifier
from the address field of the selected
entry;
redirecting the browser executing on the client
computing device to the retrieved home page
identifier;
setting a browser's home page to the retrieved home
page identifier, and~~, wherein the setting of the~~
~~browser's home page includes redirecting the~~
~~browser executing on the client computing device~~
~~to the retrieved home page identifier.~~
repeatedly re-performing, by the redirection web site,
the obtaining of the client current timestamp,
the obtaining of the one or more network
connection identifiers, the retrieving of the
home page identifier, and the redirecting of the
browser at predetermined time intervals.
